

Peacefulness declines to lowest level in 15 years fuelled by post-Covid economic uncertainty and Ukraine conflict

London, June 15, 2022, Today marks the launch of the 16th edition of the Global Peace Index from the international think-tank the [Institute for Economics & Peace](https://www.economicsandpeace.org/) (IEP).

Key results

- Deaths from external conflict recorded a sharp deterioration driven by the Russian invasion of Ukraine.
- Despite recent commitments, militarisation has decreased in 113 countries since 2008.
- Terrorism continued to improve, with 70 countries recording no attacks in 2021. This is the best result since 2008.
- The rise in costs has increased food insecurity and political instability globally, with Africa, South Asia and the Middle East under greatest threat.
- The political terror scale, political insecurity, neighbouring country relations, refugees and internally-displaced-persons (IDPs) reached their worst score since the inception of the GPI.
- The global economic impact of violence was \$16.5 trillion in 2021, equivalent to 10.9% of global GDP, or \$2,117 per person.

Impact of the War in Ukraine on Peacefulness

- Two of the five countries with the largest deteriorations in peacefulness were Russia and the Ukraine.
- Social media is changing the way intelligence is gathered - it is now shared instantaneously, raw and with little analysis.
- In contrast to the global trend, positive sentiment in the Ukraine was rising in 2021. Support for the West was strong, with 58% wanting to join a Western economic union, and 54% supporting joining NATO.

The 16th edition of the annual Global Peace Index (GPI) report, the world's leading measure of peacefulness, reveals that the average level of global peacefulness deteriorated by 0.3% in 2021. This is the eleventh deterioration in peacefulness in the last fourteen years, with 90 countries improving, and 71 deteriorating, highlighting that countries deteriorate much faster than they improve.

Iceland remains the most peaceful country, a position it has held since 2008. It is joined at the top of the Index by New Zealand, Ireland, Denmark and Austria. For the fifth consecutive year, Afghanistan is the least peaceful country, followed by Yemen, Syria, Russia and South Sudan. Seven of the ten countries at the top of the GPI are in Europe, and Turkey is the only country in this region to be ranked outside the top half of the Index.

Two of the five countries with the largest deteriorations in peacefulness were Russia and the Ukraine, they were joined by Guinea, Burkina Faso and Haiti. All these deteriorations were due to ongoing conflict.

Of the 23 indicators in the GPI, the largest deteriorations were recorded in neighbouring country relations, intensity of internal conflict, refugees and IDPs, political terror scale and

political instability. Twenty-eight countries have high levels of instability, and ten countries recorded the worst possible political terror score.

The global inequality in peacefulness has continued to increase. Since 2008, the 25 least peaceful countries deteriorated on average by 16%, while the 25 most peaceful countries improved by 5.1%. Since 2008, 116 countries reduced their homicide rate.

The cost of violence to the global economy was \$16.5 trillion, or 10.9% of global GDP, which is the equivalent to \$2,117 per person. For the ten countries most affected by violence, the average economic impact was equivalent to 34% of GDP, compared to 3.6% in the countries least affected.

There were substantial improvements for several indicators, including terrorism impact, nuclear and heavy weapons, deaths from internal conflict, military expenditure, incarceration rates and perceptions of criminality. Terrorism impact is at its lowest level since the inception of the GPI.

Steve Killelea, Founder & Executive Chairman of IEP said: *“Last year we warned about the economic fallout from COVID-19. We are now experiencing supply chain shortages, rising inflation, and food insecurity that have been compounded by the tragic events in Ukraine. The political and economic consequences of this will reverberate for years to come.*

“When combined with the record poor scores for neighbouring relations, political insecurity and intensity of internal conflict, governments, organisations, and leaders must harness the power of peace.

“The economic value of lost peace reached record levels in 2021. There is a need to reverse this trend, and the GPI has shown that those countries that implement the attitudes, institutions and structures that create and sustain peaceful societies, witness an improved economic outcome.”

Militarisation & the Ukraine war

Military spending as a percentage of GDP decreased in 94 countries, while 112 countries have reduced armed service personnel since 2008. However, the Ukraine Russia conflict, and the potential increase in military spending by NATO countries to 2% of GDP, may lead to deteriorations in future years. Independently of this conflict, China plans to increase its spending on military by 7.1% in 2022.

Optimism about the future was on the rise with three times as many people feeling they could have the best possible future than in 2019. Surprisingly, only 20% felt the government could deal with a disaster. In contrast, the proportion of Russians feeling safer than five years' prior fell between 2019 and 2021, while nearly three times as many Russians were worried about the economy*.

Although the full impact of the Ukraine Russia war is still being felt, it has had a significant effect on the Index. Many European nations near Russia have seen scores deteriorate for relations with neighbours, including Finland, Sweden, Romania, Estonia, Latvia, Lithuania, and Moldova.

The war has underlined the importance of technology in shaping conflict; 5G mobile technology, the social media revolution, and the greater affordability of drones have changed warfare. Recent conflicts have highlighted a move away from static, curated intelligence, to real time gathering via social media. Information is fluid, content driven, and shared in a raw, uncensored format.

Global economy and rise of violent demonstration

The COVID-19 pandemic pushed countries towards economic and political crises. Countries that had become progressively more peaceful experienced outbreaks of protests and violence aimed at governments' handling of the pandemic.

The intensity of violent demonstrations has increased by 49% since 2008, with 126 of the 163 countries in the Index deteriorating. This a global trend, affecting all regions of the world except MENA. Full democracies recorded the sharpest deterioration in violent demonstrations, however, the score for full democracies is still better than any other type of government.

South Asia was the region with the highest frequency and intensity of violent demonstrations where India, Sri Lanka, Bangladesh, and Pakistan recorded their highest levels since the inception of the GPI. In Europe, there were widespread anti-lockdown protests, especially in Belgium, France, the Netherlands, Austria, Croatia and the UK, with similar developments in North America.

Conflict and displacement

Ongoing Conflict had the largest deterioration at 9.3% of all three GPI domains since 2008. The number of countries experiencing violent internal conflict rose from 29 to 38, but the number of people killed in internal conflicts has fallen since 2017. The number of forcibly displaced people around the world increased from 31 million in 2008, to over 88 million in 2022.

There are 17 countries where at least 5% of the population are either refugees or internally displaced. South Sudan has over 35% of its population displaced, while Somalia and the Central African Republic have more than 20%.

Regional overview:

- Russia and Eurasia experienced the largest deterioration in peacefulness, driven by deteriorations in conflict deaths, refugees and IDPs, political instability and political terror.
- South Asia remains the second least peaceful region but recorded the largest increase in peacefulness, driven by improvements in ongoing conflict.
- Asia-Pacific recorded an increase in peacefulness, driven by improvements in all three GPI domains with the largest occurring in Safety and Security. In North America, The US had the lowest level of peacefulness since 2008, with civil unrest the primary driver.
- Violent crime increased in Central America and the Caribbean by 4.4% in 2022 to reach the highest level since 2008. Haiti had the largest deterioration in the region.
- MENA recorded the second biggest improvement globally. Yemen is the least peaceful country in the region for the second consecutive year. Libya recorded the largest improvement in peacefulness globally.
- Sub-Saharan Africa recorded a 1% deterioration. South Sudan remains the least peaceful country in the region, despite an overall improvement. Although levels of internal conflict in the country remain high, the number of deaths from internal conflict improved by 15%.

About the Global Peace Index (GPI)

Produced by the international think-tank the Institute for Economics & Peace (IEP), the GPI report presents the most comprehensive data-driven analysis to date on peace, its economic value, trends, and how to develop peaceful societies. The report covers 99.7% of the world's population and uses 23 qualitative and quantitative indicators from highly respected sources to compile the index. These indicators are grouped into three key domains: Ongoing Conflict, Safety and Security, and Militarisation.

About the Institute for Economics and Peace

IEP is an international and independent think tank dedicated to shifting the world's focus to peace as a positive, achievable and tangible measure of human well-being and progress. It has offices in Sydney, Brussels, New York, The Hague, Mexico City and Harare.
